

# Chinook

## Indoor Units Filter Cleaner - Ready to Use

**CHINOOK** is an effective cleaner for the filters of any type of indoor unit, not aggressive for their materials. Ready to use, it quickly and effectively cleans, easily removing smog, dust, mold and microbial contaminants and leaving a fresh fragrance of cleanliness.

**CHINOOK** is safe for the operator and for the filters, leaving no harmful residues in the environment because after completing its cleaning action is easy to rinse.

It is suitable for the HACCP plan.

**Instructions: CHINOOK** is ready for use. Remove the filter from the system and spray a generous dose of product on both sides. Dispense a sufficient quantity of product to evenly cover the entire surface to be treated, with at least one shot from the trigger every 10 cm. In the case of very dirty filters, remove most of the deposits with a simple beating, without coming into contact with the dust produced.

Leave **CHINOOK** work for 5 minutes, immerse the filter in clean water, then rinse thoroughly. Let the filter dry and then replace it on the system.

For proper hygienization of the environment it is advisable to repeat the operation every month. In environments that require a particular level of cleaning you can run the operation even every week.
