

# Drain Tabs

## Tablets for Condensate Drain in Split and Fan-Coil - No Biocide

**DRAIN TABS** are sanitizing tablets specifically designed for the use within the fan coil and condensate collection trays. They prevent and eliminate the phenomenon of putrefaction and formation of molds, algae, Mucilages and Limo that might clog the drain pipe, generating spillings and that can even be a source of bad odors and diseases.

The slow dissolution of **DRAIN TABS** provides a long protection for tube and the condensate collection trays. The duration of effectiveness varies depending on the use of air conditioning. Average use is 1 or 2 tablets every 15-20 days for units up to 12,000 Btu/H.

**Instructions:** open the fan-coil or the Split in order to have access to the tube or the condensate collection trays. Wear the specific personal protective equipment and take out one tab from its packaging. Place the product inside the duct of the fan coil condensate drain or inside of the condensate drain pan of the split at the farthest point from the plumbing, so that the tab can meet the condensate flow. Close the unit and allow it to work normally.

**DRAIN TABS** has to be used by an experienced operator, provided with the specific personal protective equipment. It is recommended to clean the drains at least once a year with Drizzle, drain tubes Cleaner .
